

NETGEAR's networking is a perfect fit for healthcare

– Find out why!

NETGEAR
BUSINESS

The healthcare profession depends on reliable connectivity more than ever. It's vital in helping hospitals, doctors' surgeries, dental practices and other care centers manage their day-to-day schedules.

Teams that are busy looking after patients or essential admin want connectivity that provides an always-on, consistent, stable and fast experience. It also has to be flexible, affordable, and able to cope with their increasing daily demands. Connectivity needs to 'just work'.

The latest in wireless (and switching) technology meets all those needs. Plus, for resellers and VARs, there's also the growing opportunity to support customers in healthcare, even in a completely remote way if required.

NETGEAR has extensive experience in the healthcare market and is here to help healthcare professionals, VARs and resellers make the most of what wireless has to offer: secure, flexible, affordable, easy-to-use and reliable products and services, with excellent performance and support.

Keep networks in good physical condition:

Wide area coverage

Reliable connectivity across the entire site, ideal for clinics, even as much as a mile away. Keep doctors and nurses connected to WiFi as they move from ward to ward. Use easy WiFi expansion to overcome dead-spots or support temporary sites.

Digital density no problem

Reliable wireless in even the most densely populated areas, such as busy waiting rooms: capacity for everyone to log-on. Have separate, secure WiFi networks for staff, patients and visitors.

Surveillance and storage

Connect surveillance cameras simply: even use PoE to power them to as much as 100 metres away. Use wireless to securely connect to data storage: keep patient data safe, without needing to run extra cables.

HD images and digital signage

Support digital signage in waiting rooms or for wayfinding. Transmit across HD image systems, up to 10Gb connectivity.

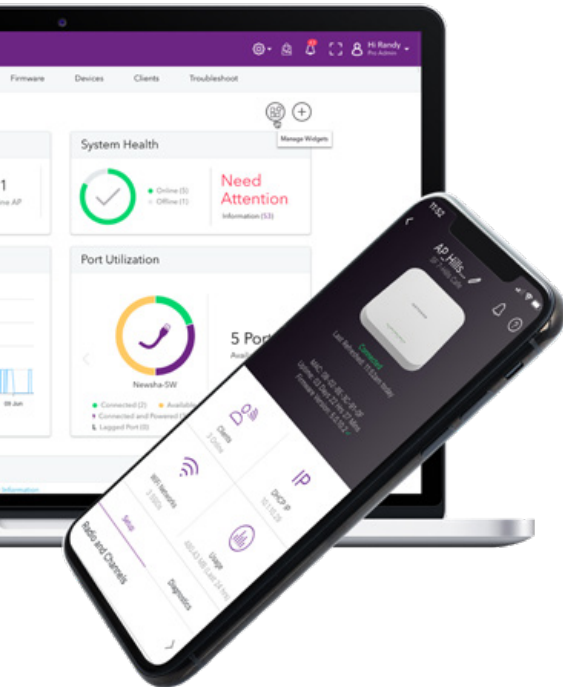

Smart wireless saves money

Power-up devices when needed, power-down when not: great for LED lighting, surveillance, and WiFi. Choose wireless access points with better capacity and reach: do more with less. Add in PoE and even save on electrical installation and power consumption.

Focus on what matters

No longer any need to waste valuable time and effort managing networks and connected devices, even across multiple sites. Centralize network management in one easy step.

Product feature highlights for Healthcare

Network connectivity and control - blend smart one-touch deployment wireless access points and switches with cloud management for easy installation, monitoring and maintenance, even remotely from a laptop or smartphone, with NETGEAR Insight.

Ideal NETGEAR Insight features for the Health professionals:

- Monitoring of the switches and the WiFi Access Points from anywhere - whether at home or in another location in the facility, monitor and manage your network from a single dashboard
- PoE scheduler - turn off your PoE ports to switch off WiFi during out of office hours automatically
- Remote PoE on/off per port - easily reboot a WiFi Access Point connected to the Insight Managed PoE switch from anywhere
- PoE budget configuration - configure a maximum PoE budget to ensure energy efficiency
- Alerts and notifications - get notified of network outages or issues for instant troubleshooting and action
- Regular reports on network - have a clear visibility and control over your network

NETGEAR's strength is to be able to solve all of today's healthcare market challenges and partner with care providers to offer the best networking today and for the years to come. NETGEAR provides all the performance, coverage and reliability healthcare professionals need together with advanced features and management at a price they love.

High-performance and high coverage WiFi for the health practices

High-performance Access Points - High density Tri-band and Mesh Access Point with WAC540, high-performance and coverage with WiFi 6 Access Points with WAX610 or Orbi Pro WiFi 6.

Instant Mesh - extend connectivity to hard-to-reach locations to create a consistent wireless experience for every user and device. Added bonuses are the the Remote/Cloud management solution (NETGEAR Insight) for easy set-up and on-going management, plus the option of integral Power over Ethernet.

Instant Captive Portal

Advanced guest WiFi portal with easy login, analytics and access logs on connections. Patients can log in through the portal and accesses are monitored easily through the Captive Portal analytics and NETGEAR Insight for setup and logs.

Smart Pro and Fully Managed switches

Powerful network switches - across copper and fiber, reliable and flexible 1Gb and 10Gb and more to connect your network at the best speeds for your needs.

Smart Pro switches managed centrally by NETGEAR Insight, for ongoing visibility over your network, from anywhere.

Business Routers

Business routing and firewall capabilities with BR200, together with site-to-site VPN from building to building to access centralized data from any location.

NETGEAR – partnering with the health profession

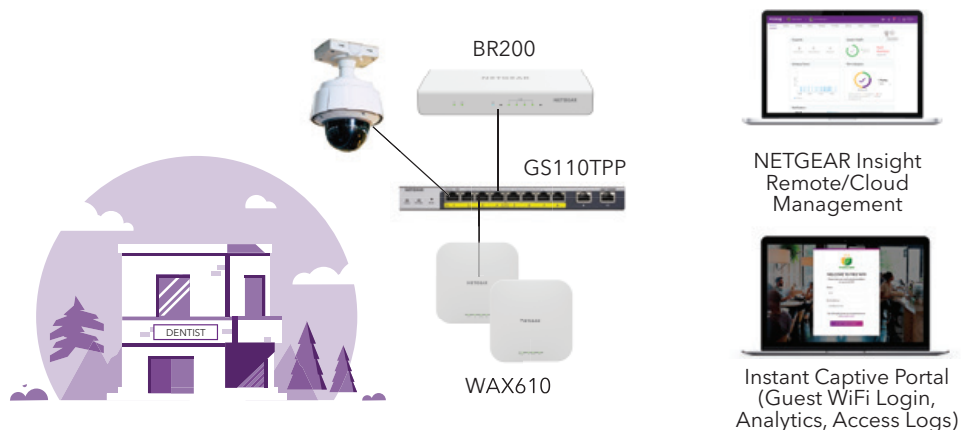

NETGEAR has worked with the healthcare sector and their networking suppliers for many years and understands what they really need. Today's NETGEAR portfolio contributes to better network well-being, with:

- Business-grade at an affordable price point
- Capacity and reach – use fewer access points
- Zero-touch deployment out-of-the-box
- Built-in security for peace-of-mind
- Flexibility to scale, configure, adapt
- Ease of deployment, ease of use
- 24/7 local and global support

Examples of deployment per healthcare location size:

Single health professional practice with hard wiring installation

Ideal for dentist office, chiropractor,
family doctor... Includes PoE switches.

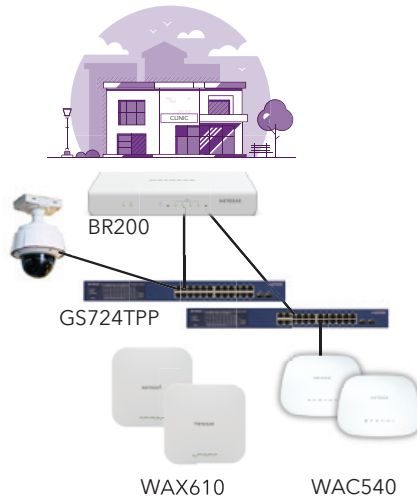

Single health professional practice with wire-free, easy installation

Ideal for dentist office, chiropractor,
family doctor...

Medium/large
health professional
practice (Group of
doctors, multiple
rooms)
